

# DUNCAN PHILIP SAMPSON

Sampson Steel was founded as Sampson Welding by Duncan Sampson in 1987. The Company employed only 2-3 people at that time. Experience and knowledge came from steadily increasing the size and complexity of steel projects undertaken. The company was incorporated under California State law in 1991 as Sampson Steel Constructors, Inc. Sampson Steel is now one of the largest steel fabrication\erection companies in California with an annual production capacity of over 15,000 tons of fabricated steel. The company now employs well over 170 people.

Sampson Steel has grown by expanding their capabilities and completing a broad spectrum of projects for a growing list of clients. Sampson Steel is proud of their reputation for on-time, on-budget performance, regardless of job difficulty or customer's production requirements. Our strategic location in Bakersfield has been positive and rewarding and has allowed us to effectively cover the entire state from top to bottom.
